## Dwarf Fescue - Bluegrass Mixture

---

### **Description:**

Bolero Plus™ Dwarf Fescue – Bluegrass Mixture is comprised of 90% Insignia dwarf growing Tall Fescue and 10% Ridge Line Kentucky Bluegrass. Exclusively grown by Oregon's finest seed producers Bolero™ boasts a very fine leaf texture for a tall fescue. This unique feature is unmatched by any other tall fescue commercially available.

### **Useage:**

Bolero Plus™ is perfectly suited for home and commercial lawns, sod production, parks, playgrounds, athletic fields and cemeteries. It harbors great strength and can be used wherever tall fescue is adapted to provide a high quality, tough, durable turf surface.

### **Maintenance:**

Low maintenance characteristics make Bolero Plus™ easy to manage. It normally requires just 4 to 6 pounds of actual N per 1,000 square feet to keep the plants dark green and healthy. Fall fertilization is best. Fertilization and excessive irrigation should be avoided during the hot summer months.

### **Disease Resistance:**

Bolero Plus™ has been bred with qualities that rein supreme over other tall fescue bluegrass mixtures. It has excellent overall disease resistance and exhibits outstanding tolerance to heat, drought and summer stress. Bolero Plus™ has outstanding winter hardiness and deep green color.

### **Seeding:**

Recommended seeding times are early to mid spring or late summer to early fall. A seeding rate of 10 pounds per 1000 square feet is recommended for new seeding. Normally, seedlings will emerge in 10 – 14 days. New plantings should be kept moist until seedlings are well established.

### **Fertilization:**

Bolero™ Sod & Seed STARTER 8-16-16 fertilizer contains beneficial nutrients that help newly planted lawns to develop a sturdy root system. Apply the fertilizer directly under sod or seed so it is readily available to the plant during the establishment period.

*Finally a Dwarf Fescue you want to walk barefoot on!*
